A stabilizer described in document 1 and a stabilizer described in document 2 belong to the technical fields that are closely related to each other; therefore, with respect to an uneven "stabilizer pocket (7)" of a stabilizer having a projection positioned at the front end of the downstream side of an air current described in document 1, as an uneven "protrusion (4b)" provided in a stabilizer described in document 2, configuring an invention so that projections are shifted in position in the direction of the rotation axis of an impeller could be easily conceived of by a party skilled in the art.</p>
